Build Anything with AI — No Code Required

Build Apps with AI — From Idea to Working Product

Prompt Engineering for ChatGPT

AI Agent Skills for Leaders

VANDERBILT UNIVERSITY

Oct 16, 2026

Jules White

Jules White, Professor, Computer Science

Adham Medhat Elsaied

has successfully completed the online Specialization

Build Anything with AI: No Code Required

Earners of this certificate can build working software, design data-driven products, and automate complex workflows using AI — without writing code. They have demonstrated command of the full stack of AI-powered computing: engineering applications from scratch, processing and visualizing information at scale, reasoning through decisions with systematic analytical frameworks, and testing what they build to professional standards. They can direct AI agents to do the work of an engineering team, a data scientist, and a product designer — turning any idea into something real.

This certificate attests to the learner's completion of an online program delivered via Coursera. It does not constitute formal enrollment at any university or entity and does not itself grant academic credit, grades, or a degree. Institutions or organizations may, at their discretion, recognize this learning toward their own programs or credentials.
